

AUTOMOBILE ANTI-THEFT DEVICE

ABSTRACT OF THE DISCLOSURE

5

An automobile anti-theft device disrupting normal operation of an automobile. To attain this, incorporated into an automobile is a module configured to disrupt the normal firing of the automobile's spark plugs upon actuation of a user-controlled controller. In an embodiment, the module electrically couples the automobile's coil to the automobile's distributor cap through a controller-controlled switch. In an embodiment, the module relays instruction sets to an engine control unit, upon execution of the instruction set the engine control unit disrupts spark plug firing. A method for preventing automobile theft, which incorporates into an ignition system a user-controlled module.
